# **Storm Damage & Roof Repair Checklist**

A free homeowner guide from [rooffixtoday.com](http://rooffixtoday.com)

## Repair vs. Replace: The Quick Read

### Likely a repair if

- ☐ Roof is under 10 years old
- ☐ Damage is isolated to one small area
- ☐ No widespread granule loss or curling shingles elsewhere

### Likely heading toward replacement if

- ☐ Roof is over 15-20 years old
- ☐ Damage is widespread across multiple areas
- ☐ Multiple leaks have occurred in different spots over time

## Active Leak? Do This Right Now

### Immediate steps

- ☐ Contain water with a bucket or container
- ☐ Carefully release a bulging, water-filled ceiling section
- ☐ Move furniture and valuables out of the way
- ☐ Photograph the damage before cleanup begins
- ☐ Do not go on the roof yourself — call a professional

## Documenting Storm Damage

### After any significant storm

- ☐ Check gutters and downspouts for dents (early hail indicator)
- ☐ Look for granule buildup in gutters
- ☐ Photograph visible damage from the ground only
- ☐ Get a professional inspection promptly
- ☐ Be cautious of unsolicited storm-chasing contractors

# Ready to get it fixed today?

Run your roof through our free damage assessor at [rooffixtoday.com](https://rooffixtoday.com) and get matched with a licensed local roofer, often same-day for urgent jobs.
